Local-national forums in nuclear and radiological emergency and recovery

Inger Margrethe H. Eikelmann
Norwegian Radiation Protection Authority
NERIS Workshop, Østerås, November 26th-27th 2012
The Chernobyl accident in Norway

• Norway was the country outside the Sovjetunion that was most effected by the fallout from the Chernobyl accident in April 1986

• Large areas of mountain pastures was heavily contaminated and caused lots of problems for grassing sheep, reindeer and cattle because radiocesium went in to the food chain

• Norway was not prepared to handle the problems and the authority was not coordinated in handling the situation

80% of the Norwegian sheep stoc use montain pasture
Countermeasures in sheep production

Number of sheep fed uncontaminated feed before slaughter 1986-2008

We expect to have to perform countermeasures for at least another decade
Consequences for reindeer production and the sami culture

Reindeer production is on a national basis reserved for sami people, because it is a key factor in the sami culture

• Reindeer are extremely vulnerable to Cs-fallout
  – Outdoor through out the year
  – The reindeer demands large areas
  – Lichen is the key source for food
  – Reindeer are not domesticated

• Aspects concerning the sami culture
  Countermeasures often conflicted with the cultural traditions
  – Earlier slaughter
  – Feeding clean feed
  – Caesium binders
  – Select low contaminated animals for slaughter
Wholebody counting of the effected sami population in Norway
New countermeasures were developed

- Rhumen tablets with cesiumbinders
- Feeding reindeer with concentrate
- Live measurement of cows
Important experience from the first years of the management of the Chernobyl accident

- Norway gained experiences from long term effects of the Chernobyl fallout for agriculture, environment and health

- Development of countermeasures to prevent uptake of the contamination in animals and dietary advises to reduce intake of radioactive contaminated food in effected population groups

- People are concerned about conditions and reality in their local environment and good management from engaged individuals in communes together with or in spite of national authorities was successful

- Locale laboratories able to measured radioactivity in food products are important for risk perception.
Public reports on nuclear emergency preparedness after Chernobyl

August 1986: «Information crisis»

November 1986: «Countermeasures in nuclear power accidents – Part I: experiences after the nuclear accident in Chernobyl»

February 1992: «Countermeasures in nuclear accidents – Recommendations on further strengthening of Norwegian emergency preparedness towards nuclear accidents»

Norwegian organisation of nuclear and radiological emergency preparedness

- Norwegian preparedness for nuclear and radiological emergencies differs from most other national emergency preparedness systems, both in Norway and in other countries. In order to ensure an efficient, rapid and competent crisis management of the early phase of a nuclear event, a national Crisis Committee for Nuclear Preparedness has been appointed.

- The Committee is authorised to make decisions and order implementation of specific countermeasures in the early phase and ensures good coordination on a sub-strategic level (directorate level).

- The Crisis Committee may on its own initiative implement countermeasures in the early phase and acts as advisor for the government and ministries in later phases.

- The Crisis Committee has advisors from several national authorities and organisations. These advisors can also be viewed as stakeholders.
Norwegian Nuclear and Radiological Emergency Organisation

The Norwegian Nuclear and Radiological Emergency Organisation (RKR) Information Group serves as the Government's Crisis Advisory Body. Its role includes:

- **Assisting the Crisis Committee with information management.**
- **Membership:** Recruit members from the Crisis Committee member agencies.
  - Food Safety Authority's regional and district offices
  - Police / LRS
  - Civil Defence

**Tasks:**
- Is the Crisis Committee's regional link
- Is a local/regional Nuclear Committee (ABU)
- Coordinates and contributes to regional preparedness
- Coordinates the implementation of measures
- Provides information
- Acts as a link between central and local levels
- Reports back to the Crisis Committee
- Facilitates, guides, and supervises

**Expectations:**
- **Before the accident:**
  - Risk and vulnerability analysis
  - Knows the nuclear organization
  - Obtain an overview of municipal resources for use during an accident
- **Measurement:**
  - Competence
  - Preparation of information
  - Participation in briefings / meetings / courses / events organized by county governor
- **During the accident:**
  - Relates to the county governor
  - Implements measures that are implemented
  - Operates information communication

**Ministries:**
- Ministry of Health and Care Services
- Fisheries and Coastal Affairs
- Ministry of Defense
- Justice and Emergency Department
- Agriculture and Food
- Ministry of Environment
- Industry and Trade
- Ministry of Education
- Ministry of Transport
- Ministry of Foreign Affairs

**Civil Service Group for Coordination of nuclear preparedness:**
- Chaired by the Health and Care Services
- Manages inter-ministerial issues
- Contributes to the coordinated development and maintenance of national preparedness

**Advisors shall possess relevant competence and tools to analyze the extent of nuclear incidents and their consequences.**

**Institutions and Agencies:**
- Norwegian Institute for Agricultural and Environmental Research (Bioforsk)
- Directorate for Nature Management
- The Norwegian Directorate of Fisheries
- The Norwegian Defense Research Establishment
- The Institute of Marine Research
- The Institute of Energy Technology
- The Norwegian Meteorological Institute
- The Norwegian Institute of Public Health
- The Geological Survey of Norway
- The Norwegian Polar Institute
- Ullevaal University Hospital
- The Norwegian University of Life Sciences
- The National Veterinary Institute
- The Norwegian Radiation Protection Authority
- The Directorate for Civil Protection and Emergency Planning
- The Ministry of Defense
- The National Police Directorate
- The Norwegian Directorate of Health and Social Services
- The Norwegian Food Safety Authority

**Mandate:**
- Obtaining information, data, and forecasts
- Formulating and distributing information
- In emergency situations, taking action on:
  - Securing the contaminated areas
  - Emergency evacuation
  - Measures in the food production
  - Cleaning of contaminated individuals
  - Staying indoors
  - Staying in shelters
  - The use of iodine tablets
  - Dietary advice
  - Other dose-reducing measures
Challenges for strategies and plans for long-term recovery 25 years after Chernobyl

- Still need for countermeasures in reindeer husbandry and agriculture in some but few municipalities

- No real need for comprehensive countermeasure plan regarding the Chernobyl fallout and thereby no plans for future accidents

- Lack of experience – vulnerable for loss of competence in serveral fields, such as radioecology, measurement strategies and planning, countermeasure effectiveness etc.

- As a result: There is still need for nuclear and radiological emergency planning, but the need is not very visible in day-to-day life
Nuclear and radiological emergency preparedness seminars for regional authorities

- A series of seminars in nuclear and radiological emergency preparedness for all the 19 county governors in Norway

- One day-seminar arranged by the NRPA for the county emergency board and the administration

- Content of the seminars
  - Threat/hazard assessment and the nuclear and radiological emergency preparedness organisation
  - Methods and tools for decision making
  - Information strategies
  - Countermeasure strategies

- Table top exercise
The EURANOS project – Involvement of people affected by the contamination of an area

- How do we best prepare for the long-term effects of nuclear accidents?

- Who may help to develop the best management practices and which methods should be used?

- How do we get appropriate information so that the concerns of the affected people will be included in the management plans?
The process - who and how

- Participants from the local communities, local- regional- and national authorities responsible for health, agriculture and environment, and NGO’s

- Participants with and without Chernobyl experience

- Two workshops of 2 days each in January and March 2008

- Two facilitators organized the workshops

- IDPA-method was used
How do we proceed forward from the EURANOS project?

• Practice: Change the authorities mind set from ”making plan FOR” to ” making plans WITH”. This means that local- regional and national administrations and people representing other interests should cooperate when improving the emergency preparedness.

• This requires that we:
  - Increase the general knowledge about risk and possible countermeasures
  - Create arenas for cooperation for potential partners
  - Start cooperative planning processes before a contamination situation occurs
NERIS-TP The WP3.1 subproject

A series of seminars are set up where authorities and stakeholders at all levels and sectors are involved. These seminars will address the following challenges:

- **I. Threat assessment** - what are possible scenarios that could cause radioactive contamination of our municipality/local territory?
- **II. Sensitivity analysis** - what part of the community would be most affected?
- **III. Evaluating mitigating actions** - what are the choices? Can they be implemented in our community?
- **IV. Engaging local actors** - who need/should be involved in the local cooperation to solve the challenges, at various phases of the emergency? What are the responsibilities and roles? How will the engagement be done in practice?
- **V. National assistance** – (i.e. assistance between different national levels) what are the expectations and what is possible? How will the chain national → regional → municipality/local cooperation work in practice? Roles and responsibilities of each level.
Local-national forum for emergency and recovery strategies in Østfold in Norway

- Establish local-national forum for improvement of both local and national capabilities
- Build strongly on already existing national and local initiatives. The fora will address the challenges met by municipalities/local communities when planning for nuclear and radiological emergency and recovery preparedness and response
- The initiative and planning of the first forum seminar was done by the County Governor of Østfold, The Farmers Association, Norwegian Food Safety Authority and the Norwegian Radiation Protection Authority
- The aim was to bring together all involved parties to strengthen the late phase emergencies after a nuclear accident/incident in the county and the municipalities
- The seminar had introductory sessions in radioecology, relevant countermeasures and discussions on a radioactivity fallout scenario
Conclusions from the seminar

- Through the discussions, the participants realised their roles and responsibilities and the need to be better prepared for this kind of emergencies.

- There are many practical challenges which need to be solved locally, and there need to be prepared emergency plans. It is important that these plans are made with stakeholders on all levels.

- There are need for different kinds of decision support tools and educational tools for the local and regional authorities. These tools need to be well-known in advance of an emergency.

- Procedures and systems for communication between local, regional and national levels in the emergency response organisation need to be developed in order to have a successful implementation of countermeasures during an emergency and late phase recovery.
Developing tools for local-regional forums

- Evaluation of the seminar for the local-national forum on emergency and recovery strategies in Østfold, and a follow-up seminar in February 2013

- A similar forum will be established in Nordland county in northern Norway, where there are post-Chernobyl experiences

- Working on developing specific decision support tools on a local and regional level, in supplement to already existing decision support tools on national level

- There is a established a communication tools to facilitate communication between the national Crisis Committee as decision makers and the local level where decisions are implemented, with emphasis also on systems to provide feedback to the Crisis Committee (CIM)
Developing tools for local-regional forums

- Nordic projects on presentation of prognoses
- Cooperation between NRPA and the Norwegian food safety authorities on models for contamination in drinking water and using EURANOS handbooks
- Cooperation with regional authorities using their GIS systems for handling local countermeasures
We still have ways to go to improve emergency preparedness

Thank you for your attention
